ABSTRACT

This five-part report provides a compilation and analysis of data on student completion of courses at Mercer County Community College between summer 1979 and spring 1980. After an executive summary of findings, Part II provides background information on the study, which examined volume measures, such as credit hours, and success indicators, such as completion rates. Part III provides data on course completion rates, which were computed by dividing the number of students who received successful grades (A to D) by the number of students receiving successful grades plus the number of students who withdrew or did not complete the course. Completion rates by campus and semester are given for both day and evening students and for each department. Part IV presents the rank order of 100 courses according to the volume and efficiency measures of headcount enrollment, enrolled credit hours, earned credit hours, and credit hours not earned. Finally, Part V examines grade distributions in credit courses and student grade point averages (GPA's) by department, course discipline, and course. Findings, which are contrasted where possible with data from previous years, include the following: (1) completion rates fell from .77 in 1974-75 to .68 in 1978-79 and then registered a slight rise to .69 in 1979-80; (2) net departmental course completion rates ranged from .93 for Library to .61 for Math/Physics/Computer Science; and (3) the grade B was consistently the most commonly assigned grade. ACKNOWLEDGEMENTS

This report was prepared by Nancy Aronson, Consultant to O.I.R., with the guidance of Dr. Thomas Collins, Director of Institutional Research. Building upon the combined efforts of many individuals at Mercer County Community College, the current report is an update of the previous work of Esther Taitsman and Marilyn J. Ebert, and the report "Student Success in Courses" by Thomas Wilfrid and Theresa Babitts. Special thanks are given to Jim Rohe of the Computer Center for programming assistance, Sharon P. Doherty of the Text Processing Center for typing, and Anne McMaster of O.I.R. for editing the text.

1979 -- 1980

I. EXECUTIVE SUMMARY

There was little change from the previous year in course completion rates (IE-1) and volume measures. The college-wide course completion rate increased by one percentage point from 68 to 69%. A more detailed examination shows some decline in this rate for the summer semester, but relative stability during the fall and spring. Departmental rates have remained fairly constant.

Table 1 and Figure 1, on the following two pages, show information about course completion rates from 1973-74 to 1979-80. The IE-1 increased slightly from .75 in 1973-74 to .77 in 1974-75. Over the next four years, the IE-1 decreased: .73 in 1975-76, .71 in 1976-77, .70 in 1977-78, and .68 in 1978-79. An IE-1 of .69 in 1979-80 represents a very slight increase. A further analysis by campus and semester is presented in subsequent tables.

It may be noted that during 1979-80 the course completion rates for two courses increased sharply (From .32 to .52 in MA 109, and from .40 to .57 in DP 132), while for PY101 it decreased (from .73 to .63). Other changes in rates by course were quite small. Neither volume measures nor grade distributions showed major changes when compared with the previous academic year.

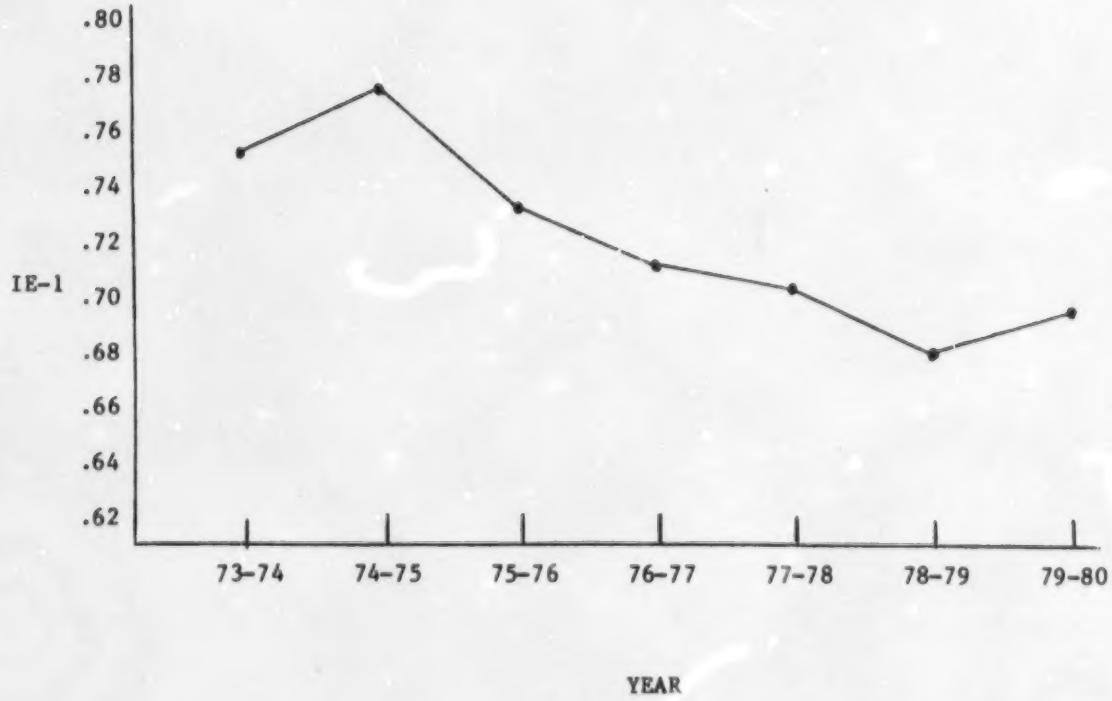
1973-80



II. BACKGROUND

A. Overview

This report provides a compilation and analysis of the available statistical data on student completion of MCCC courses of study between the summer, 1979 semester and the spring, 1980 semester. Some comparisons are also provided with previously published data. The purpose of this report is to provide descriptive information for faculty members and administrators with respect to course enrollments and grade distributions at the College. Where appropriate, specific items and patterns which may be of particular interest have been noted. Further interpretation of the data is left to the Division of Academic Affairs.

B. Measures

The measures used in this report provide two different perspectives on student enrollment: volume measures such as credit hours, and "success" indicators such as completion rates and grade distributions.

1. Volume Measures. There are various indicators which are utilized in composite lists of course volume rankings and other measures. They include the following:

   ENRT - Student headcount enrollment

   SCRH - Student credit hour enrollment, excluding 100% refund withdrawals

   PCRH - Passed credit hours or credit hour enrollment that resulted in successful grades (A through D)

   XCRH - Student credit hour enrollments that did not result in successful grades (NC and W)

2. Completion Ratio (IE-1). The most prevalent metric included in this report is IE-1, the decimal fraction of enrolled student credits which resulted in a successful grade. (The label IE-1 originated from a list of several administrative measures of "Instructional Effectiveness," adopted some years ago by the Office of the Dean of Faculty). IE-1 represents the ratio of passed credit hours to passed credit hours plus student credit hours that did not result in successful grades (IE-1 = $\frac{PCRH}{PCRH + XCRH}$). It should be noted that the SCRH is not used in this ratio as it includes students who audit courses. This report includes several tables displaying IE-1 and other measures of institutional interest that relate to course volume and grade distributions. It also ncludes a sequential list of large courses in order of their completion ratios.

Also utilized in some tables is a slightly different measure called IE-1A, the decimal fraction of student headcount enrollments which resulted in successful grades. This was used only when data based upon credit enrollments were not available.

III. COURSE COMPLETION RATES

A. Completion Rates by Campus and Semester

Amplification of the summary data provided in Table 1 is presented in Tables 2, 3, 4 and 5. These tables show that except for the summer semester, IE-1 rates have remained fairly constant with scores fluctuating only within a few percentage points. The decline in the summer completion rate is reflected across both campuses and for both day and evening students.

B. Completion Rates by Department

The net departmental course completion rates are shown in Table 6. During 1979-80, the scores ranged from a high of .93 for Library, to a low of .61 for Math/Physics/Computer Science. The rates represented little change from the previous academic year. The largest declines shown were only 3 percentage points, which occurred in the areas of Social Science and Engineering/ Architecture. The largest increases were 4 and 5 percentage points, in Math/ Physics/Computer Science and Telecommunications respectively.

It may be noted that the listing does not reflect the current departmental structure of the College. Rather, the former structure has been maintained in order to preserve the longitudinal nature of the study.

Table 6

Course Completion Rates by Department

Department	1978-1979 Student Credit Hours	1978-1979 IE-1	1979-1980 Student Credit Hours	1979-1980 IE-1

IV. COURSE VOLUME AND EFFICIENCY MEASURES

Course Volume Measures for the past academic year, 1979-80, are shown on Table 7. One hundred courses are presented in rank order according to four volume measures: headcount enrollment (ENR), enrolled credit hours (SCRH), earned credit hours (PCRH), and credit hours not earned (XCRH).

A course's relative position within each of the four rankings depends on the specific factor being measured: enrollment, credit value, or course completion rate. For example, PE110 had the second largest enrollment (ENR), yet it ranked seventh in enrolled credit hours (SCRH) because it is a two credit course. EG101 ranked the highest on three measures: head count (ENR), enrolled credit hours (SCRH), and earned credit hours (PCRH). However, it was ranked second in credit hours not earned (XCRH). This year's top twelve ranked courses on the ENR and SCRH volume measures were fairly consistent with those from 1978-79.

Table 8 shows the ten top-ranked courses for PCRH and XCRH for both 1978-79 and 1979-80. In terms of the PCRH dimension, MA109 moved from eleventh in 1978-79 (1107 - .32) to sixth in 1979-80 (2028 - .52). It remained ranked first in volume for XCRH, but it may be noted that the percentage failing decreased from .68 in 1978-79 to .48 in 1979-80. PY101 maintained its second-place rank for the volume earned credit hours, but the percentage passing decreased from .73 in 1978-79 to .63 in 1979-80. For the most part, other percentages have remained fairly consistent.

[a]Earned credit hours
[b]Credit hours not earned

Table 9 presents courses with 300 or more enrolled credit hours (SCRH) in descending order of their student success ratio (IE-1). Courses with the highest IE-1 levels were found, once again, in the Nursing program. Changes from 1978-79 include: MA109, which increased from .32 to .52; DP132, which increased from .40 to .57; BA107, which increased from .75 to .85; HS102, which increased from .85 to .93; PY101, which decreased from .73 to .63; and SY103, which decreased from .52 to .43.

V. GRADE DISTRIBUTIONS

This section contains statistical information on student grades in credit courses. The MCCC grading system provides four passing grades, A through D, with quality point values of 4 through 1, respectively. Student withdrawals prior to the 60% point in a semester lead to transcript notations of W. Later withdrawals or unsuccessful course completions result in transcript notations of NC. Neither W nor NC are counted in the computation of a student's quality point average (QPA). As a result, QPA is a useful course grading measure which is independent of IE-1; IE-1 represents the students who pass, while QPA represents grading levels among only those students who passed a given course.

Table 10

MCCC Grade Distributions: Credit Courses

1975-1980

Year	(duplicated headcount) Enrollment	Grade %A	%B	%C	%D	%NC	%W	%AU[a]	QPA
1975-76	44,041	21	25	20	7	16	11	--	2.81
1976-77	42,333	21	24	19	7	19	10	--	2.85
1977-78	40,207	21	24	18	6	18	11	2	2.87
1978-79	41,297	21	23	17	6	19	11	3	2.90
1979-80	42,605	20	23	17	6	20	10	4	2.87

Note. All calculations are based on head count enrollments, not credit enrollments. PEN statistics are excluded.

[a]AU = audit + blanks

Source: Computer Center Job #ZECS010, RPT 3.

There has been a consistent pattern in the assignment of grades during the five years for which data are reported (1975-1980). The grade B ("Above Average Achievement") has been the most commonly assigned grade. During the first four years shown, 21% of all students were awarded the grade A ("Outstanding Achievement"); this past year, this percentage fell slightly to 20%. The distribution of the grade C ("Average Achievement") has consistently decreased, from 20% in 1975-76 to 17% during the last two years. During the years 1978 to 1980, the assignment of the grade D ("Sufficient Achievement") dropped to 6%; it was at the 7% level during the two preceding years. The percentage of courses not completed (NC + W) has been approximately 30% over the past five years.

Departmental QPA's were fairly stable for the two years under consideration (see Tables 11 and 12). In 1978-79, QPA's ranged from 2.63 (Biology/Chemistry) to 3.43 (Library). In 1979-80, they ranged from 2.63 (Academic Skills) to 3.62 (Library).

Over the past two years, the three departments with the highest QPA's were Library, Visual Arts, and Performing Arts. The lowest were found in Academic Skills, Biology/Chemistry, and English/Foreign Language.

Table 13 shows grade distribution percentages for all course disciplines, including QPA and IE-1A. Differences emerge in grade averages across departments, and for the different course disciplines.

The data presented in Table 14 represent the percent grade distributions and course completion rates (IE-1) for all courses offered last year.
